Review questions for lesson 2: Code Quality

1. How can you temporarily disable a breakpoint in the Chrome console?
2. What does the 'debugger' command do?
3. What is the purpose of step-over, step-in, and step-out?
4. Give two benefits of coding conventions.
5. Why does JavaScript have so many 'linters'?
6. What is the purpose of JS Doc?
7. Explain Behavior Driven Development and how it is "three things in one: testing, documentation, and examples"
8. What is the 'one test tests one thing' principle?
9. How do unit tests make developers more confident to make changes to existing code?
10. Describe how you would implement your own version of Mocha, or at least a simple first-pass version of it. Consider the describe, it, and assert functions in the basic 'pow' mocha test and how they must be implemented by the Mocha framework.
